RUCTIONS TO CONTRIBUTORS FOR THE PARATION OF MANUSCRIPTS FOR DIRECT RODUCTION

hedron Letters is a medium for the rapid publication ort communications in English, French or German and s maximum dissemination of outstanding developments ganic Chemistry.

n ever-increasing number of papers is submitted for cation this places a very heavy responsibility on the es, who endeavour to select only those urgent nunications which describe work of special merit.

submitting a communication, authors should include a statement justifying acceptance in accordance with the ving essential requirements.

oes the communication report new or advanced ideas, chniques, structures, methods or conclusions of interest a substantial proportion of organic chemists?

oes the nature of the work justify urgent publication?

this work likely to stimulate interest and ideas in veloping fields?

the presentation clear and concise?

ypewritten manuscript is reproduced *photographically*, ach communication is a separate entity. Authors are sted to send papers of 2 or 4 pages. Manuscripts of 6 will no longer be considered for publication and articles or just over 3 pages may be returned to the authors for ening.

Manuscripts should be typed to one and a half spaces, a black ribbon (blue ink cannot be reproduced) on quality white bond paper. The typist should ensure a clear impression on the letters.

Special size paper, 27 cm wide by 36 cm deep with the typing area of 20½ cm by 26½ cm can be obtained on st to any of the Regional Editors. However, any good y paper may be used, provided the actual typing area is cm by 26½ cm, the margins being provided during duction. A duplicate (carbon or photocopy) should mpany the original.

The title should be all in *capital letters,* centred on the of page 1 with the title at least 5 cm from the top of ge. After one line space, the author's name and address parate lines, capitalizing the first letter of all main . The author or authors to whom correspondence d be addressed by readers of the journal should be ted by an asterisk. The typing area of page 1, including e, should be 20½ cm wide by 24½ cm deep.

The typing area of *all* other pages should be extended to h of 26½ cm.

The drawing of formulae, graphs and other figures l be included in the text, so as not to exceed the speci- yping area. Illustrations may be in the form of prints pasted into the appropriate place or else they e carefully drawn in black ink on to the typing paper in that will remain legible after a slight reduction. Again that the caption does not become confused with the ormulae should be drawn with Indian ink and a stencil traset" used.

ach page should be numbered lightly at the bottom of eet in blue pencil.

Manuscripts reporting X-ray crystallographic work must b accompanied by a list of refined co-ordinates for depositio at the Cambridge Crystallographic Data Centre. (See detaile Announcement to Authors, *Tetrahedron Letters* 308 (1978).)

ABSTRACT

Authors must include a one-sentence abstract in *English* o not more than three lines typed in single spacing. This mus appear immediately after the address and before the com mencement of the communication. Key words are no longe required.

REPRINTS

Owing to the short production time for articles in thi journal, it is essential to indicate the number of reprint required *when submitting the manuscript.* Confirmation o such orders will accompany the notification of acceptance Reprint orders received later than the manuscript cannot b executed until printing of the issue concerned has bee completed, and a price quotation will be supplied.

MAILING OF MANUSCRIPTS

Communications in English should be sent in duplicate directl to the Honorary Regional Editor for the particular areas a outlined below. Communications in the French languag should be sent to Professor Ourisson; those in the Germa language to Professor Staab. Comprehensive Organic Chemistry

The Synthesis and Reactions of Organic Compounds

Chairman and Deputy of the Editorial Board: SIR DEREK BARTON, FRS and W. DAVID OLLIS, FRS

Independent Opinion by Three of the World's Leading Organic Chemists

Quotations from the Reviews Published in Tetrahedron

"I confess that I have been much impressed by Volume 1, largely, of course because it meets my criteria for a personal reference text for the practising organic chemist."

Lord Todd FRS (Cambridge)

"To a synthetic organic chemist the chapters are not only comprehensible but interesting and highly informative....
This is a first class treatment of the subject."

W.S. Johnson (Stanford)

"The compilers of Volume 6 have succeeded admirably in providing the reader with an excellent vehicle to reach, both simply and efficiently, the substantial corpus of knowledge embodied in the preceding five volumes."
